

Privacy Policy — PlayLearn English

Effective date: [insert date you publish this page]

PlayLearn English ("the app", "the game") is developed by Zoojooz ("we", "us", "the developer"). This policy explains what data the app interacts with and why.

Summary

- The app contains **no advertising SDKs**, **no analytics SDKs**, and **no third-party trackers**.
- The app is **fully playable offline**.
- The only data-handling feature is an **optional** sign-in to Google Play Games Services, used solely to sync your best scores and achievements to the worldwide leaderboard.
- We do not operate any servers of our own and do not collect, store, or see any personal data ourselves.

What data the app collects

The app itself does not collect, transmit, or store any personal data on any server we control. Gameplay progress and high scores are stored only in the app's local storage on your device, unless you choose to sign in (see below).

Google Play Games Services (optional)

If you choose to sign in with Google Play Games, the app uses Google's Play Games Services SDK to:

- Verify your Google Play Games identity (gamer ID / display name / avatar), so scores can be attributed to you.
- Submit your best score to a single worldwide leaderboard.
- Unlock and display in-game achievements.

This sign-in is **entirely optional**. If you decline it or are offline, the app continues to work normally — your progress is simply kept on-device instead of appearing on the worldwide leaderboard.

This data is collected and processed by Google, not by us, under Google's own Play Games Services terms. Google's Play Games Services SDK documentation states that when a user signs in, their gamer identity (gamertag, avatar) is collected, and, depending on how a game is used, game scores and unlocked achievements are also collected and stored on Google's servers to power the relevant features. Data in transit is encrypted (HTTPS). You control the visibility of your Play Games profile (Everyone / Friends only / Only you) from your [Play Games profile](#) or your Google Account, and you can delete this data at any time from there.

We do not have access to, and do not separately collect or store, any of the account or gameplay data described above.

Permissions the app uses

- **Internet / network state** — used only to sync scores/achievements with Google Play Games Services when you're signed in. Not used for ads or tracking.
- **Vibrate** — used for in-game haptic feedback.
- **Wake lock** — used to keep the screen on during gameplay.

No location, contacts, microphone, camera, storage, or other sensitive permissions are requested.

Advertising and analytics

This app does not display advertisements and does not integrate any advertising SDK (e.g. AdMob). It does not integrate any analytics or crash-reporting SDK (e.g. Firebase Analytics, Google Analytics, Crashlytics) of our own. No advertising identifiers are collected by us.

Children's privacy

PlayLearn English is intended for a general audience and is not directed specifically at children under 13. We do not knowingly collect personal information from children. If you believe a child has provided personal information through the optional Google sign-in, please contact us (below) and also see Google's own guidance on managing a child's Google Account.

Data retention and deletion

We do not retain any personal data, because we do not collect any ourselves. Any data associated with your Google Play Games sign-in is retained and can be deleted by you directly via your [Play Games profile](#) or your [Google Account](#).

Changes to this policy

We may update this policy from time to time, for example if we add new features that involve data collection. Changes will be posted on this page with a revised effective date.
