

Privacy Policy — The House of Bog

Effective date: [2026-08-03]

The House of Bog ("the app", "the game") is developed by Zoojooz ("we", "us", "the developer"). This policy explains what data the app interacts with and why.

Summary

- The app contains **no advertising SDKs, no analytics SDKs, and no third-party trackers**.
- We do not operate any servers of our own. We do not collect, see, or store any personal data ourselves.
- The app optionally saves images to your own Photos library, and can share images through the standard iOS share sheet — both entirely under your control.
- The app integrates with Siri, Spotlight, and Shortcuts (Apple's "App Intents" system) so you can open bogs by voice or from search — this stays entirely on your device.

What data the app collects

The app itself does not collect, transmit, or store any personal data on any server we control. Your progress through the game (which level you've reached, which postcards you've sent or kept) is stored only in the app's local storage on your device.

Photos access

If you choose to "Keep" a postcard, the app saves an image to your Photos library. This uses Apple's "add-only" photo permission — the app can add images to your library, but cannot read, browse, or access any other photo already on your device. This permission is requested only at the moment you choose to keep something, and you can revoke it at any time in Settings.

Sharing

If you choose to "Send" a postcard, the app hands the image to Apple's standard share sheet, the same system-provided sharing interface used across iOS. What happens next (which app you send it through, who receives it) is between you and whichever service you choose — we have no visibility into it and no involvement in it.

Siri, Spotlight, and Shortcuts

The app uses Apple's App Intents framework so that bogs can be opened via Siri, found through Spotlight search, and used in the Shortcuts app. This is entirely on-device: Apple's system learns your usage patterns locally to make better suggestions, but none of this data is sent to us, and we have no access to it. See Apple's own privacy documentation for how on-device Siri personalization works.

Advertising and analytics

This app does not display advertisements and does not integrate any advertising SDK. It does not integrate any analytics or crash-reporting SDK of our own. No advertising identifiers are collected by us.

Children's privacy

The House of Bog is a general-audience app and is not directed specifically at children under 13. We do not knowingly collect personal information from children.

Data retention and deletion

We do not retain any personal data, because we do not collect any ourselves. Your local game progress can be cleared at any time by deleting the app. Any photos you've saved remain in your own Photos library under your own control, governed by Apple's standard Photos app.

Changes to this policy

We may update this policy from time to time, for example if we add new features that involve data collection. Changes will be posted on this page with a revised effective date.
